
Auditor of b
without proofs:
sampled epochs
Bank b
each member
OmissionOracle
contract on L
Verifier
member or
supervisor
epoch e ends; after δ:
Merkle root r_b^e of the
salted leaves of B_b^e
commitBooks(e, r_b^e)
barrier: all committed or
W blocks; last block β^e
block $\beta^e{+}1$ final:
$s^e{=}\,\text{keccak}(\text{hash}_{\beta^e+1}\|e)$;
mask positions $\leftarrow \text{Perm}_{s^e}$
seedOf$(e) = s^e$
$S_b^e = \mathsf{Sk}_{s^e}(\sigma_b B_b^e)$
$+ \sum_c \epsilon_{bc} R_{bc}^{e,m,a}$;
proof π_b of S_b^e from r_b^e
commitSketch$(e, \text{keccak}\, S_b^e, \pi_b)$
verify π_b; barrier: all
sketches committed or
W blocks
reveal(e, S_b^e)
accepted only if it
matches the commitment
and arrives within W
blocks
revealMask(e, c, R_{bc})
only for an absent bank
c: its mask neighbours
post the masks they
share
aggregate$(e) = A^e$
at a final block: $A^e = 0$,
consistent; otherwise
peel: $(\kappa, +1)$, the payee
lacks x; $(\kappa, -1)$, the
payer lacks x; if peeling
stops, re-publish with
$a{+}1$ and $2m$ cells
leaf of κ and its path to r_b^e
B_b^e, salts, mask streams
recompute r_b^e and S_b^e;
compare with the ledger
